EDUCATION

University of Georgia | Morehead Honors College Athens, GA
Bachelor of Science in Computer Systems Engineering December 2028
Bachelor of Science in Electrical & Electronics Engineering 3.77 GPA
Minor in Computer Science, Certificate in Cybersecurity & Privacy
Engineering Academic Boot Camp Scholar, NACME Scholar, NSLS Scholar, Zell Miller Scholarship Recipient

RELEVANT WORK EXPERIENCE

Small Satellite Research Lab (SSRL) Athens, GA
RF Design Engineer, LEARNSat Embedded Software Engineer September 2025 – Present

- Fabricated custom software defined radio circuit designs in Altium and analyzed their communication in real time using digital signal processing techniques in C++
- Facilitated increased communication between the Embedded Systems Software and Hardware team for congruent design for interfacing the onboard radio

University of Georgia College of Engineering Athens, GA
Engineering Academic Boot Camp Peer Mentor/Peer Leader June 2025 – August 2025

- Guided 14 incoming engineering freshmen through an intensive boot camp designed to build academic readiness, community, and confidence
- Facilitated workshops and study sessions on foundational engineering concepts and college success strategies
- Propelled team-building activities and group discussions to foster collaboration and a sense of belonging

RELEVANT PROJECT EXPERIENCE

PicoBoy: A Microcontroller-based Game Boy November 2025

- Integrated 3 custom emulators for retro video game consoles, embedded file system, and audio processing in C++ on a Raspberry Pi Pico
- Improved existing Game Boy shell and electronics with custom PCB designs for power systems, audio, graphical, and input systems, and precise CAD models in Autodesk Inventor for 3D printing and mechanical assembly
- Designed and implemented a custom graphics driver and touch interface for an SPI-based LCD screen, enhancing user interaction and display performance

The SARS-COV-2 Pandemic Computer Generated Simulator August 2022 – February 2023

- Constructed a SARS-CoV-2 mortality prediction simulator with 98% accuracy, informed by research from over 8 medical and scientific journals
- Formulated with key fundamental software concepts in mind, including Object Oriented Programming, modularity, and cross-compatibility in Python

ACTIVITIES AND INVOLVEMENT

ARES LAB, UGA | Head of Embedded System Security Research August 2025 – Present

- Founded the University of Georgia's first undergraduate cybersecurity research lab, launching software and hardware exploitation projects and building 3 custom hardware-hacking tools for internal bug-bounty research
- Engineered an open-source Microsoft Outlook extension to detect phishing attempts using artificial intelligence and remote API calls in Node JS

The Hack Pack, UGA | Community Trainer and Coordinator August 2024 – Present

- Organized community outreach efforts and produced over 14 training workshops in cryptography, wifi hacking, reconnaissance, binary exploitation, and reverse engineering
- Awarded Most Improved Teammate with 2nd place finish at the 2025 NCAE Cyber Games Southeast

Dev Dogs, UGA | Algorithms Team Focus Lead June 2024 – June 2025

- Streamlined the management of over 30 team members and creation of an internal documentation system as the Algorithms Team Focus Lead
- Oversaw the integration of the Algorithms team into our full stack web application with third party APIs like CP-SAT and Jenetics in Java

SKILLS

Technology Concepts: Linux/Unix, Networking, Version Control, CAD, Hardware Design, RF Design, Altium, KiCad, Pentesting

Programming Languages: C/C++, Java, Python, Javascript, HTML/CSS, Node.js, Julia, Matlab, LaTeX

Professional: Leadership, Cooperation, Collaboration, Critical Thinking, Communication

Languages: Fluency in English, Proficiency in Spanish
